

Dr. Alexander (Sandy) Boag is an Associate Professor in the Department of Pathology and Molecular Medicine at Queen's University. He serves as the lead thoracic pathologist at Kingston Health Sciences Centre (KHSC), with additional clinical expertise in cytology and genitourinary (GU) pathology.

Dr. Boag's research interests focus on translational aspects of lung and GU pathology, with an emphasis on bridging diagnostic pathology and clinical application to improve patient care.

He has held several senior administrative and leadership roles, including Chair of the Department of Pathology and Molecular Medicine at Queen's University, Divisional Chair of Anatomical Pathology at KHSC, Regional Pathology Lead for Cancer Care Ontario (CCO), and Medical Director of the KHSC Cytology Laboratory.

Dr. Boag completed his undergraduate training in Chemical Engineering at Queen's University, followed by a Master's degree in Biomedical Engineering at the University of Toronto. He earned his medical degree at Queen's University and completed residency training in Anatomical Pathology at Queen's.
