

Palliative Medicine Rotation

Block 6 20-21

Resident Presentation

Each rotating resident will be responsible for a short (10 minute maximum) presentation regarding a palliative care topic – this can be researching a palliative question, a specific symptom management approach, appraising a recent journal article, or reviewing a palliative care news story with background information.

Hopefully it will be a question that came up as a result of a patient you have seen on this rotation. Examples in the recent past include “Management of depression in advanced cancer”, “Role of IV fluids in end-of-life”, “Prognostication tools”, “Recent RCT on delirium management in palliative care” etc. It should not include a Powerpoint presentation. A handout is not necessary but can be useful. Please speak to your attending physician in community/PCU/clinic/KGH if you need help with choosing a topic.

The schedule for Block 6 is as below:

Name	Time/Date	Location
